

Risk Assessment Training

Designed to teach workers the risk management process, including how to accurately complete a risk assessment and safe work method statement (SWMS) in accordance with their workplace procedures. This course can be tailored to meet your organisational requirements.

Cost and duration – 4 hour course for \$250 per person

Certification

Students who are deemed competent will receive a Statement of Attendance recognised under the Australian Qualifications Framework. This certification is nationally recognised. The Statement is issued by Career Development and Training (RTO 45581)

Course Overview

Participants will learn to complete JSA's and risk assessments. Our training is very workplace specific. We will look at your risk assessment processes and the hazards that are specific to your workplace. We will cover different methods of risk controls and the various consequences and categories of risk. We will examine the hierarchy of hazard controls as well as devising tailored risk reduction strategies.

During the course we will complete several practical risk assessments and look at different methods for risk elimination and risk control. We will complete many of the practical tasks in a group environment on actual work tasks that company personnel undertake.

Course Outline

- WHS legislation overview concerning risk assessments
- Risk assessment process
- AS/NZS ISO 31000:2009 Risk Management Standard
